SafetyNet™ **ASSURE**

Staff Safeguarding
Personal Alarm System

Lone workers face real risks.
SafetyNet Assure keeps your team
connected and safe.

Discreet protection.
Reliable response.
Real-time connection.

Discreet protection. Reliable response. Real-time connection.

First designed for the Scottish prison system, SafetyNet Assure brings high-security-level protection to any environment where staff safety is a priority. Robust, compact, and built for the real world, it's trusted in some of the most demanding sectors – and designed to safeguard your staff.

Why SafetyNet Assure?

With its focus on reliability, security, and ease of use, SafetyNet Assure is the safety solution of choice for lone workers in a range of high-risk and high-responsibility industries. It offers maximum peace of mind with minimum effort in maintaining staff safety.

The unit is continuously online, with or without Wi-Fi, cellular coverage or external networks. That makes it ideal for indoor use where the coverage is weak or non-existent. It is small and light, so it can be easily worn on a wrist strap, belt clip, or lanyard – whatever is most convenient for the user's application and environment.

SafetyNet Assure offers a variety of ways the alarm is initiated, ranging from a pull on the ripcord, a press of the red panic button, to a simple double tap on the device. Aside from user-initiated activation, the in-built man down and fall detection technology can also automatically initiate the alarm on sudden impact falls or lack of movement over time.

Due to its rechargeable long-life battery, it offers up to 36 hours of active operation and up to six months of sleep mode – ideal for infrequent or on-call use. Designed and constructed in the UK, it's a tool frontline staff in prison services, healthcare, and more have learned to rely on.

Each unit remains perpetually serviceable and maintainable throughout its 10–15 year service life, offering reliable security long term. Direct purchase through outright purchase, lease through low-cost monthly program: SafetyNet Assure provides flexible solutions according to your business case and working budget.

Always connected

No Wifi, mobile signal, or external networks required

Compact & lightweight

Wear it on a wrist strap, belt clip, or lanyard

Multiple activation methods

Pull the ripcord, press the red button, or double tap

Man down & fall detection alert

Detects sudden impact or inability to move

Long life battery

Up to 36 hours active use, 6 months sleep mode

UK designed & built

We are a UK company

Serviced & maintained

Throughout its 10-15 year lifespan

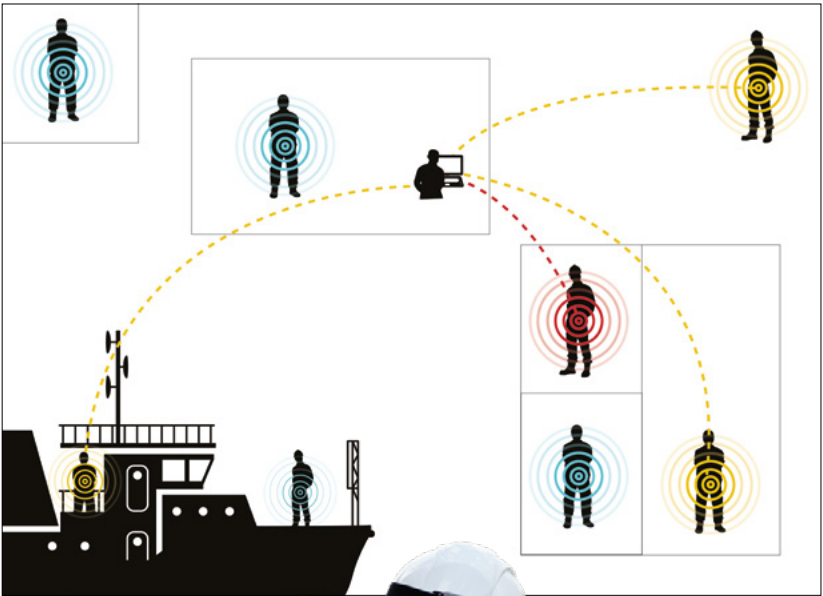

Purchase or hire

Flexibility to suit your needs

How does SafetyNet Assure work?

SafetyNet Assure uses a patent-pending mesh technology that offers a reliable, seamless safety coverage irrespective of infrastructure like Wi-Fi or GPS. This makes it ideal for complex environments like large buildings, underground areas, and areas with weak or no connectivity.

At the heart of the system is the SafetyNet Mesh – a system of wire-free beacons tracking movement and providing accurate, real-time location information. The system is designed to work on its own, seamlessly, across multiple buildings and floor to floor, without fail.

Its modular system design allows for simple expansion of coverage by adding additional beacon routers, making it scalable to any building size. In case of an emergency, visible and audible alarms such as sirens, flashing lights, and control room notifications ensure that incidents are detected instantly and addressed.

For multi-site organisations, the system is cloud-ready with remote monitoring and management integration as an optional feature. Alerts can be configured to follow flexible escalation paths, i.e. SMS, email, online portal alerts, or straight to on-site control rooms – allowing each organisation to integrate the response process into its own procedures.

Built for Demanding Environments

Proven in high-security and high-risk settings	Assure Device Specifications	Flexible Investment Options
- Developed for Scottish and Australian prison services - Successfully deployed across secure mental health facilities, care homes, and hospitals - Designed to withstand rough use and unpredictable conditions	- Size: 45mm x 65mm x 18mm - Weight: ~100g - Battery: Rechargeable via USB (up to 1 week in continuous use) - Durability: Waterproof (IP55) - Usage: Suitable for environments with poor GPS/ Wi-Fi reception	- Buy or lease – Choose what works best for your organisation - Low operational costs – Designed for long-term value - Full support – Devices are maintained and serviced for their 10–15 year lifespan

Protect your team today!

How can we help you?

PMR Products can provide a complete package from initial survey and consultation through design, manufacturer, software applications development, installation and commissioning.

PMR Products also provides a complete lifetime support package through on-site services and remote support. A fully managed service can be made available with flexible finance options to fit in with your specific funding needs balancing CAPEX and annual spending needs.
